

ABDELRAHMAN GAMAL

FRONTEND ENGINEER • ANGULAR | TYPESCRIPT

Cairo, Egypt | +20 109 820 1435 | abdo.gamal9700@gmail.com | [linkedin.com/in/abdel-rahman97](https://www.linkedin.com/in/abdel-rahman97) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Frontend Developer with hands-on experience converting design mockups into responsive, production-grade interfaces using Angular and React, styled with Tailwind CSS and Bootstrap. Skilled at translating UI/UX designs into pixel-accurate, cross-browser components, integrating REST APIs, and optimizing Core Web Vitals — improving performance scores by 35%+ while collaborating closely with designers and backend engineers in Agile teams.

EXPERIENCE

Frontend Developer (Contract) | Egypt Agro Global (EAG)

Jun 2026 – Aug 2026 | [Live Platform](#)

- Architected responsive, multi-page web layouts using React, TypeScript, and Tailwind CSS, achieving a 98+ Google Lighthouse performance score.
- Translated wireframes and design mockups into 11+ production-ready pages and 30+ reusable modular UI components.
- Engineered interactive product catalog filtering, dynamic client-side state, and media presentation layers with sub-second response times.
- Implemented internationalization (i18n) across 6 localized languages, increasing prospective international client engagement by 40%.
- Optimized Core Web Vitals via asset preloading, image compression, and code splitting, cutting First Contentful Paint (FCP) by 45% (2.6s → 1.4s), and validated layouts across major browsers and device sizes.

PROJECTS

Market.Arch (Nafa3ni) — P2P Marketplace | Angular 21, TypeScript, Signals, GSAP, Socket.io

Feb 2026 – Jul 2026 | [GitHub Repo](#)

- Architected a Single Page Application using Angular 21 standalone components and Signals, reducing component re-render overhead by 35% and achieving sub-100ms UI interaction latency.
- Built a Neo-Brutalist design system with 25+ reusable, responsive components from design references, including GSAP timeline animations and a client-side comparison tray exporting specs to PDF in under 1.5 seconds.
- Engineered real-time messaging and notification micro-services with Socket.io, supporting buyer-seller negotiations and flash-sale sync across 100+ concurrent simulated users.
- Secured client architecture using dual-token JWT auth with automatic refresh interceptors, protecting 20+ REST routes with 0% unauthorized token leaks.

Blood Bank Management System | Angular, TypeScript, ASP.NET Core, SQL Server

Oct 2022 – Jan 2023

- Engineered 10+ component-driven UI views in Angular managing records for 1,200+ donors and hospital requests with zero critical data desync.
- Collaborated with 3 backend engineers to establish clean REST API contracts, finishing project testing 2 weeks ahead of schedule.

SKILLS & COMPETENCIES

Frontend Development: Angular, React, TypeScript, JavaScript (ES6+), RxJS, Socket.io-client, GSAP, HTML5, CSS3, Tailwind CSS

Design-to-Code & UI: Figma-to-code implementation (design handoff, responsive layout translation), Responsive Design, Cross-Browser Compatibility, Component-Driven Architecture, Web Performance Optimization (Core Web Vitals)

Technical Concepts: State Management, REST APIs, PostgreSQL (Neon), Drizzle ORM, Git & GitHub

Soft Skills: Cross-Functional Collaboration, Problem Solving, Effective Communication, Time Management, Adaptability, Critical Thinking, Ownership

EDUCATION

Bachelor of Computer Science & Artificial Intelligence — Helwan University, Egypt | *Graduated Jan 2023*

PROFESSIONAL TRAINING

Digital Egypt Pioneers Initiative (DEPI) — Frontend Web Development Track | *Completed July 2026*

ADDITIONAL INFORMATION

Military Service: Mandatory Military Service, Egyptian Armed Forces — Completed (2024 – 2025)

Languages: Arabic (Native), English (Professional Working Proficiency)
